**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5 drawn to a flashlight control means for an electronic camera based upon the vertical sync pulse, classified in class 348, subclass 371.
  - II. Claims 6-9 drawn to a camera that includes a flashlight and a frame generating means for framing the boundaries of the illumination range classified in class 348, subclass 333.03.
2. The inventions are distinct, each from the other because:
3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the device for framing the illumination range of Group II does not require the means for controlling the flash of Group I. The subcombination has separate utility such as in any camera requiring the control of the flash device.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
